

# 1. SCIENTIFIC NOTATION

CH30S UNIT 1 WIEBE

1

## SCIENTIFIC VALUES IN SCIENTIFIC NOTATION

Name	Symbol	Value
Universal gravitational constant	$G$	$6.67 \times 10^{-11} \text{ N}\cdot\text{m}^2/\text{kg}^2$
Acceleration due to gravity	$g$	$9.81 \text{ m/s}^2$
Speed of light in a vacuum	$c$	$3.00 \times 10^8 \text{ m/s}$
Speed of sound in air at STP		$3.31 \times 10^2 \text{ m/s}$
Mass of Earth		$5.98 \times 10^{24} \text{ kg}$
Mass of the Moon		$7.35 \times 10^{22} \text{ kg}$
Mean radius of Earth		$6.37 \times 10^6 \text{ m}$
Mean radius of the Moon		$1.74 \times 10^6 \text{ m}$
Mean distance – Earth to the Moon		$3.84 \times 10^8 \text{ m}$
Mean distance – Earth to the Sun		$1.50 \times 10^{11} \text{ m}$
Rest mass of the electron	$m_e$	$9.11 \times 10^{-31} \text{ kg}$
Rest mass of the proton	$m_p$	$1.67 \times 10^{-27} \text{ kg}$
Rest mass of the neutron	$m_n$	$1.67 \times 10^{-27} \text{ kg}$

## DEALING WITH MEASUREMENTS

In chemistry, we deal with some very LARGE numbers:

$$1 \text{ mole} = 6020000000000000000000000$$

We also deal with some very SMALL numbers:

$$\text{Mass of an electron} = 0.00000000000000000000000000000091 \text{ kg}$$

4

## DEALING WITH MEASUREMENTS

Imagine the difficulty of calculating the mass of 1 mole of electrons!

$$\begin{array}{r} 0.00000000000000000000000000000091 \text{ kg} \\ \times 6020000000000000000000000000000 \\ \hline \end{array}$$

??

5

## SCIENTIFIC NOTATION

A method of representing very large or very small numbers in the form:

$$M \times 10^n$$

- $M$  is a number between 1 and 10
- $n$  is an integer

6

## WRITING NUMBERS IN SCIENTIFIC NOTATION

Step #1: Insert an understood decimal point

Step #2: Decide where the decimal must end up so that one non-zero number is to its left

Step #3: Count how many places you bounce the decimal point

Step #4: Re-write in the form  $M \times 10^n$

If moving the decimal makes the number smaller, then the exponent gets larger.

If moving the decimal makes the number larger, then the exponent gets smaller.

7

## EXAMPLE #1

5732 grams

If moving the decimal makes the number smaller  $\blacktriangleright$   
then the exponent gets **larger**.

8

## EXAMPLE #2

0.0050 m

If moving the decimal makes the number  
**larger**, then the exponent gets smaller.

9

## CALCULATIONS IN SCIENTIFIC NOTATION

When multiplying and dividing two numbers in scientific notation, always do it in THREE STEPS!

1. Front numbers
2. Exponents
3. Units

$$(1.0 \times 10^5 \text{ kg})(1.0 \times 10^{-2} \text{ kg})$$

10

## MULTIPLYING SCIENTIFIC NOTATION

### EXAMPLE #1

$$(3.0 \times 10^5 \text{ cm}) (2.0 \times 10^4 \text{ cm})$$

11

## DIVIDING SCIENTIFIC NOTATION

### EXAMPLE #2

$$\frac{(9 \times 10^7 \text{ kg})}{(3 \times 10^3 \text{ s})}$$

12

## DIVIDING SCIENTIFIC NOTATION

### EXAMPLE #3

$$\frac{(4 \times 10^{-3} \text{ s})}{(1 \times 10^{-5} \text{ s})}$$

13

## SCIENTIFIC NOTATION ON YOUR CALCULATOR

14

## CHALLENGE!

1 mole of anything:  
60000000000000000000000000000000

Mass of an electron  
0.00000000000000000000000000000090 kg

HOW MANY KILOGRAMS WOULD 1 MOLE OF ELECTRONS WEIGH?

15
